

ABSTRACT OF THE INVENTION

A method is provided for storing, verifying and updating the shipping of a product using packing slip data that is scanned onto a server where the data can be accessed via the Internet at both the supplier and purchaser locations. The method comprising the steps of inputting

5 packing slip data for a product to be shipped onto a server that is connected to the Internet, storing the information contained on the packing slip onto the server, comparing the information from the stored packing slip to a supplier database on the server, updating the stored packing slip information based on the comparison to the supplier

10 database, printing the updated packing slip from the server, attaching the printed packing slip to the product to be shipped. Once the product is delivered to the purchaser, the purchaser verifies the printed packing slip to the shipped product and inputs exceptions and notations onto the server. This inputted information is then compared to the supplier's

15 database and a modified shipment is prepared, if necessary.
